

Healthcare Digital Readiness Audit

Is your clinic, lab, or hospital losing time because digital systems are not connected?

Many healthcare businesses already use software for billing, reports, appointments, accounting, or patient communication. The operational gap usually appears between those systems: missed enquiries, delayed reports, manual follow-ups, weak backup routines, limited dashboard visibility, and unclear ownership when something breaks.

AICloudStrategist's **Healthcare Digital Readiness Scorecard** helps leadership identify practical technology and workflow gaps without forcing a full system replacement.

Best fit

- Specialty clinics and multi-doctor practices
- Diagnostic centres and pathology labs
- Small hospitals and nursing homes
- Healthcare businesses planning HIS, EMR, LIS, cloud, backup, automation, or digital presence upgrades

What you receive

1. 30–45 minute leadership discovery session
2. Digital workflow map
3. Risk and leakage scorecard
4. 30-day improvement roadmap
5. Implementation estimate

What we review

Area	Practical question
Enquiries and appointments	Are calls, website forms, WhatsApp, Google enquiries, reminders, and no-shows tracked clearly?
Billing, reports, and follow-up	Where do billing issues, report delays, repeat-visit gaps, or manual staff dependencies appear?
Backup and continuity	Can the business recover if a front-desk PC, server, internet line, or software vendor is unavailable?
Access and privacy hygiene	Are roles, passwords, staff exit processes, and patient-data handling basics controlled?
Website and trust presence	Do patients clearly see services, timings, doctors, location, appointment CTA, and trust signals?
Management visibility	Can leadership see daily leads, appointments, revenue, pending reports, and follow-up actions?

Data boundary: No patient records, reports, patient IDs, personal health information, or medical files are required for the initial readiness review.

CTA: Book a 20-minute readiness review to identify practical digital workflow gaps and the next 30-day improvement priorities.

Score each area from 1 to 5

1 = manual/high risk · 3 = functional but inconsistent · 5 = reliable, measurable, and scalable

Readiness area	Score
Patient enquiry capture — website, Google Business, calls, WhatsApp, walk-ins, source tracking	/5
Appointment workflow — booking, reminders, rescheduling, queue visibility, missed follow-ups	/5
Billing and payment flow — billing accuracy, payment capture, GST/TDS/claims coordination if relevant	/5
Reports/prescriptions delivery — turnaround time, WhatsApp/email/SMS delivery, patient access experience	/5
Follow-up and repeat visits — reminders, packages, chronic-care follow-up, review requests	/5
System integration — HIS/EMR/LIS/billing/lab machines/accounting connectivity	/5
Backup and disaster recovery — frequency, offsite copy, restore testing, ransomware recovery path	/5
Access and data hygiene — user roles, password practices, device access, staff exit process	/5
Website and trust presence — services, doctors, timings, location, appointment CTA, trust signals	/5
Management visibility — dashboard for leads, appointments, revenue, reports, pending actions	/5

Readiness interpretation

0–20: Critical gaps	Immediate fixes needed for reliability, backup, and patient communication.
21–35: Operational but leaky	Systems work, but manual gaps create delays, revenue leakage, or admin load.
36–45: Growth-ready foundation	Good base; focus on automation, analytics, security hardening, and patient experience.
46–50: Scale-ready	Optimise integrations, dashboards, compliance evidence, and multi-location governance.

Discovery questions for leadership

1. Which systems are used today for appointments, billing, EMR/HIS/LIS, accounting, and reports?
2. Where do most patient enquiries come from: Google, website, WhatsApp, referral, walk-in, or campaigns?
3. How are missed calls, missed WhatsApp enquiries, no-shows, and pending reports tracked?
4. What still depends on paper, Excel, phone calls, or staff memory?
5. How often are backups taken, and when was the last successful restore test?
6. Who can access patient records, reports, billing, and admin dashboards?
7. What happens if the front-desk PC, local server, internet, or main software stops working for one day?
8. Which improvement would create the highest business value in the next 30 days?

Offer note: Healthcare Digital Readiness Audit: ₹15,000–₹35,000 + applicable taxes, depending on organisation size and number of systems/locations reviewed.

Important disclaimer: This is not medical, legal, regulatory, DPDP, NABH, ABDM, or cybersecurity certification. It is a practical technology and workflow readiness review for business improvement, operational resilience, and better digital execution.
